## Kaydon **infinite**<sup>®</sup> bearing solutions

### New Replacement Bearings

Replacing worn bearings in construction machinery and other heavy equipment can take a big chunk out of your maintenance budget. But you can save significantly with new replacement bearings from Kaydon Bearings.

Kaydon has been producing advanced custom bearings since 1941, and today is one of the world's leading suppliers. We specialize in solving difficult design problems and maximizing value. Kaydon infinite<sup>®</sup> bearing solutions include new replacement slewing ring bearings that meet OEM specs at substantial savings vs. the price of an OEM bearing. And we offer faster delivery and a full one-year warranty.

Kaydon can manufacture any slewing ring configuration, up to 26.25' (8m) in diameter, to original OEM specifications or design practices. Our proven process begins with reverse engineering and a comprehensive design analysis — including mounting structure review and lubrication recommendations — to maximize dynamic life and static capacity.

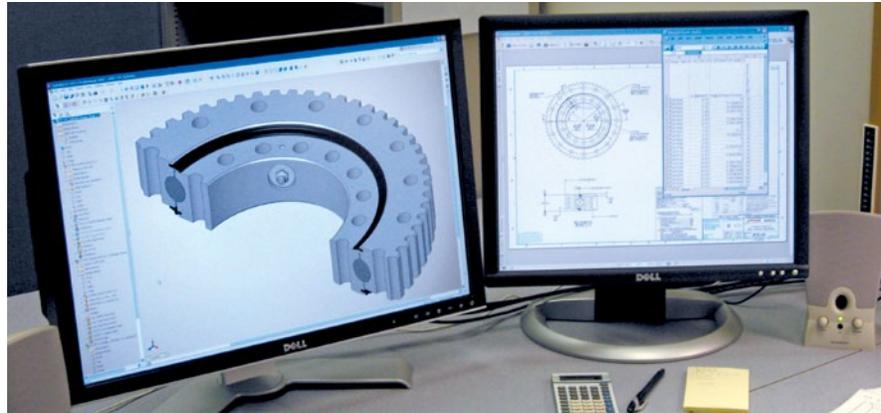

New replacement bearings from Kaydon let you stretch your budget without compromising on quality. For details, call Kaydon Bearings today.

# Leading the way in custom bearings... and customer satisfaction

Kaydon Bearings has solutions for all customer specs and budgets. Our new replacement slewing ring bearings (O.D.s to 315 inches) are widely used in cranes, mining shovels, excavators, forestry machinery, and much more. Kaydon's leadership is clear at every level.

**Engineering** – Our engineering team is known for overcoming the most demanding design challenges as cost-effectively as possible. They combine years of experience in a wide range of markets with the latest computer technology and analytical tools.

**Manufacturing** – The industry's most modern facilities assure Kaydon of control over quality and scheduling

to meet customer requirements. Our strategically located plants in Ohio, South Carolina and Mexico have the flexibility to fill high-volume or low-volume orders.

**Quality** – Certifications at these facilities include ISO 9001:2008 and the stringent requirements of the military and the aerospace industry. Six Sigma, Lean Manufacturing and other widely accepted methodologies help us keep these operations functioning at a world-class level.

**Support Network** – A dedicated service team supports global customers from design through delivery, and is available for installation support and trouble-shooting.
